Inclusive Technology For Students Who Are Visually Impaired:

Software

- **Computer-(low vision)-ZoomText** gives you the total computer access solution. See and hear what you’re doing in all of your applications, and give your eyes a rest while ZoomText reads your documents, web pages and email – right through your computer’s speakers. With ZoomText Magnifier/Reader, your computer is easier to see, hear, and use.

- **Computer –(blind)-JAWS** for Windows Screen Reading Software

  JAWS is the world's most popular screen reader. Developed for computer users whose vision loss prevents them from seeing screen content, JAWS reads aloud what's on the PC screen.
Low Vision Aids:

1) globe
2) Specialized glasses: Eschenbauch

• Monoculars (similar to binoculars, but only for one eye)

A monocular is a low vision device used for distance viewing in the classroom and in the community. This middle school student with albinism is looking to see if the bus is coming.
• Dark lined/raised line books, papers

Future Aids: The Braille Superstore
Abbotsford, BC
V2T 3T1 Canada

This paper can be used for visually impaired people. Printing on this type of paper is sometimes easier when there are tactile or dark lines to write in between.

• Slant board

MAC PLASTICS LTD. Edmonton, AB T6E 5K4
780-435-3761
Fax 780-435-1716

Price as of March 2009 was $37 for a standard black slantboard. The slant board raises the students work (reading and/or writing) to help avoid neck strain.

• 2B pencils

Staples

• Erasable pens
